P.S.:

String GetDataFile(const char *name);

Similar to GetExeDirFile, however, when app is started from TheIDE, file from package directory.

The idea is to store project related resources (e.g. textures for 3D app) into package during the develeopment, then for relase copy them with app.

Mirek

P.S. - Edit by fudadmin: this topic was split by me to better serve "future u++ users"...
