Hello,

how can be seen in the following picture the numbers are not aligned vertically although each row has been formatted and contains always the same numbers of chars.

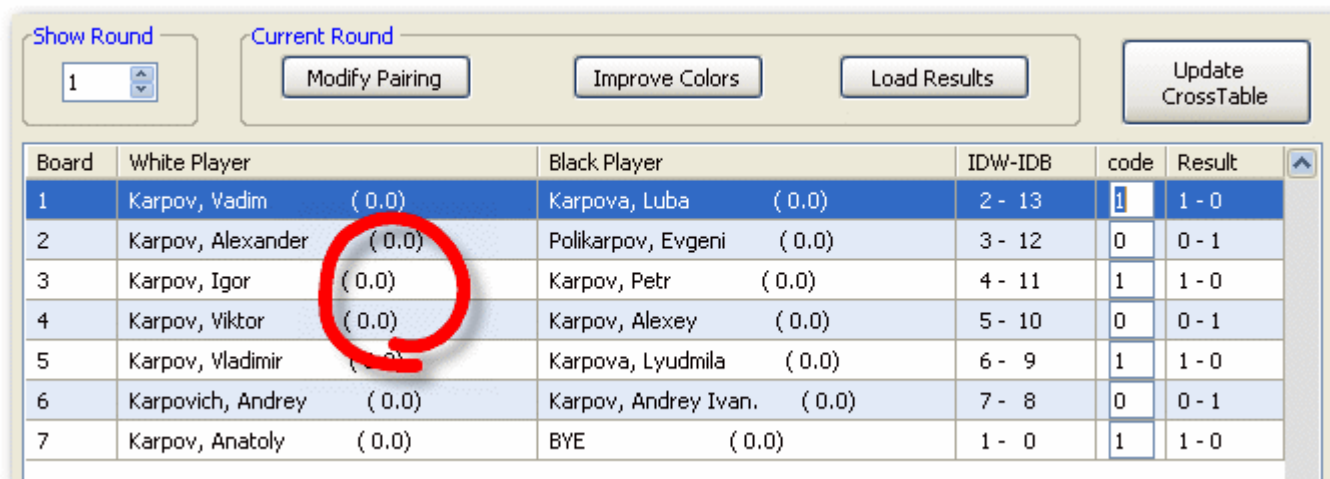

If I could use the Courier font the problem would disappear. Unfortunately I was not able (I used even Navigate...) to found something useful to set the font and maybe the color.

A workaround is to use label inside each cell. Another is to assign a new column to the number but I do not like the vertical line between the name and the number.

Luigi
