Subject: EditString in toolbar doesn't work

Hello,

in my toolbar I've added an editstring. In it I want to show the filename currently in use. I know the status bar is better place for this but I want save space in my page.

First I engaged a terrible struggle with the editstring that appeared microscopic. When I lost the hope I've found a hint on the forum:

```
bar.Add(edts, edts.AddFrameSize(200,15));
```

and I won the battle.

But then I lost the war because it refused to adjourn its content. I mean it is unsensitive to the command <<= like in this snippet:

```
void VegaTab4::Load(const String& name)
{
    editor.Set(LoadFile(name));
    //edts <<= name;    //doesn't work
    //edts.SetText(name); //doesn't work
    edts <<= "prova";    //doesn't work
    editor.ClearModify();
}
```

So, is it possible to send a string in the editstring embeded in a toolbar?

Luigi

PS: the editstring is seteditable to false, but it doesn't work even if it is set to true.
