
Subject: Proposal: set HttpRequest::MaxContentSize(int64)

I'm writing some web downloading utility which handles partial downloading of disk images from Web through Http. And it looks like the size of downloaded data may easily overcome INT_MAX (which is 2GB). I guess others may meet this problem too in the future.

So I propose changing HttpRequest::max_content_size from int to int64 (also changing HttpRequest::MaxContentSize() argument to int64) to be able to handle bigger data chunks.
