koldo wrote on Wed, 05 June 2013 06:54 Thank you Uno

Quote:GridCtrl already has WhenLeftDouble. Have you tried it? Of course. The problem is that the opened EditString captures it.

I see.. Then the only solution is too create you own grid control and override ChildMouseEvent method. I could add callback there but IMO this is too specific case to do that.

You could also try the opposite way and react on double click in control that is attached as editor in grid's column.
