
Subject: Build debian package on Debian/kFreeBSD

Hello,

My OS is Debian/kFreeBSD 7.0.2.

Source packages are downloaded from <http://upp.invothink.com/release/pool/main/u/upp/>

When I build `upp_5485-1~wheezy0` I got some error messages.

Using flags `GUI GCC DEBUG DEBUG_FULL GNU/KFREEBSD POSIX`

`uppsrc/Core/config.h:45:6: error: #error Unknown OS`

Could you help me to fix this issue ?

Thanks.
