The obvious bug I can see is that ParseXml expects zero terminated string, but you are loading the exact size from the file, without adding zero at the end.

Try

```
String xml = LoadFile(path);  
if(xml.IsVoid()) return false;
```

instead of

```
FileIn iFile(path);  
  
if(!iFile.IsOpen())  
{  
    return false;  
}  
  
int len = (int)iFile.GetSize();  
Buffer<char> pBuf;  
pBuf.Alloc(len);  
  
iFile.GetAll(pBuf,len);  
  
iFile.Close();  
  
String xml = ~pBuf;
```
