Hello Jerson,

To put images in SQL I use this:

```
//=====
//      IMAGES
// =====
TABLE_(IMAGES)
  INT_(IMG_ID) PRIMARY_KEY AUTO_INCREMENT
  LONGRAW_(IMG_DATA)
END_TABLE
```

And to update image in sql:

```
sql * SqlUpdate(IMAGES)(IMG_DATA, SqlBinary( JpgEncoder().SaveString(img) )
).Where(IMG_ID == resId);
```

In fact the image is stored as a string (I don't remember why: it's been 3 years since I wrote this code, maybe because I export it in XML afterwards

Hope this helps
