I look at MS ODBC sample app (<https://code.msdn.microsoft.com/ODBC-sample-191624ae>)

This sample app using SQL_WCHAR datatype constant. This works (and SQL_CHAR works too)
- MSSQL converts GUID to string properly. (Sample using SQLBindCol approach instead SQLGetData)

It is strange that SQLGetData(..., ..., SQL_CHAR,...) inside Upp returns error.
I think I miss something obviously.
