
Subject: Compilation error with GCC

Hi all,

There is a long time I did not come on the forum. I still explore U++ high level capacity for rapid development.

I was interested to test the GCC compiler and I downloaded the upp archive 9687 embedding the Ming compiler. The installation worked perfectly (as usual with U++) but I got the following fatal error when compiling the Control4U_Demo project in Bazaar package

```
D:\Installations\Compilateurs\upp\bazaar\Functions4U\LocalProcess2.cpp (151): error: invalid initialization of non-const reference of type 'Upp::WString&' from an rvalue of type 'Upp::Wstring'
```

Any idea ? or MSC15 is still the preferable alternative ?

Thanks in advance for advice

Regards
Biobytes
