I inspected some example in reference,
you can probably fix you problem simply by changing

```
Customers.AddColumn(PROSPECT, "Prosp.", 5).Edit(OpProspect);
```

to

```
a.AddColumn(PROSPECT, "Prosp.", 5).Ctrls<Option>();
```

Turns out Mirek has taken care of your situation long long time ago. But again, use customized Display to draw a picture requires more coding, but will save you some memory. Whether it's worth it is your own decision.
