luzr wrote on Tue, 12 September 2006 11:29: Ooops, sorry. But at least, I would insert "else" between two variants ("\$\$PD"):

```
String Report::FormatHF(const char *s, int pageno)
{
    String result;
    while(*s) {
        if(s[0] == '$' && s[1] == '$') {
            if(s[2] == 'P'){
                result.Cat(Format("%d", pageno + 1));
                s += 3;
            }
                else
            if(s[2] == 'D'){
                result.Cat(Format(GetSysDate()));
                s += 3;
            }
        }
        result.Cat(*s++);
    }
    return result;
}
```

Yes, good idea. I wanted to pu that else also, but you were faster
