Yes it works. Thank you

```
Display::Paint(aDraw,aRect,AttrText(sometext).Center().SetFont(Arial(40)),Red,Null,0);
```

The answer is to set to Null the paper color.

Ps:

I have to declare the Display object, but I read somewhere that it is static.
How can I use it directly without declaraction?

Like this:

```
Single<StdDisplayClass>().Paint(w, r, q, ink, paper, style); // don't compile
```
