Hi Oblivion,

Thank you for your response.

After adding

```
#include <Core/SSL/SSL.h> // <==
```

I get same error.

I am using squid proxy.

With browser set to use proxy is accessing the url with same username and password.

Any other hints.

Code Section from http.cpp

```
void HttpRequest::StartConnect()
```

```
{  
    LLOG("HTTP StartConnect");  
    if(!Connect(addrinfo))  
        return;  
    addrinfo.Clear();
```

```
  
    if(ssl && ssl_proxy_host.GetCount() && !ssl_get_proxy) {  
        StartPhase(SSLPROXYREQUEST);  
        waitevents = WAIT_WRITE;  
        String host_port = host;  
        if(port)  
            host_port << ':' << port;  
        else  
            host_port << ":443";  
        data << "CONNECT " << host_port << " HTTP/1.1\r\n"  
            << "Host: " << host_port << "\r\n";  
        if(!IsNull(ssl_proxy_username))  
            data << "Proxy-Authorization: Basic "  
                << Base64Encode(proxy_username + ':' + proxy_password) << "\r\n";  
        data << "\r\n";  
        count = 0;  
        LLOG("HTTPS proxy request:\n" << data);  
    }  
    else  
        AfterConnect();  
}
```

I get HTTP StartConnect in log file

I am not getting HTTPS proxy request: in log file
