Hi,

* Even with larger code, the reported leak size remains the same

This is usually a signature of leak in the library (in this case OpenCV) itself.

It might be that you are not freeing what you've allocated before, or some probably a bug deep in the library itself.

If it is an OpenCV upstream issue which we can't fix, we use the functions to silence to leaks detector of U++. You can find them here.

Best regards,
Oblivion
