deltastorm wrote on Fri, 09 February 2007 13:38 Has this bug ever been tracked down? I am having the same problem with 2007.1 beta 3 on WinXP. If I am running the IDE, switch to another virtual desktop, then switch back, the IDE will eat up all my CPU cycles and be unable to redraw itself. The only way to close the program is through Task Manager.

WinXP SP2

nVidia 6150LE

No, not yet. Any information is highly welcome.

Mirek
