
Subject: [SOLVED] RasterPlayer displays artifacts for gif's with alpha

Hello,

I just tried to display sample .gif downloaded from the internet inside RasterPlayer. I used the AnimatedClip example. However, the image I downloaded from giphy is wrongly displayed (with artifacts):

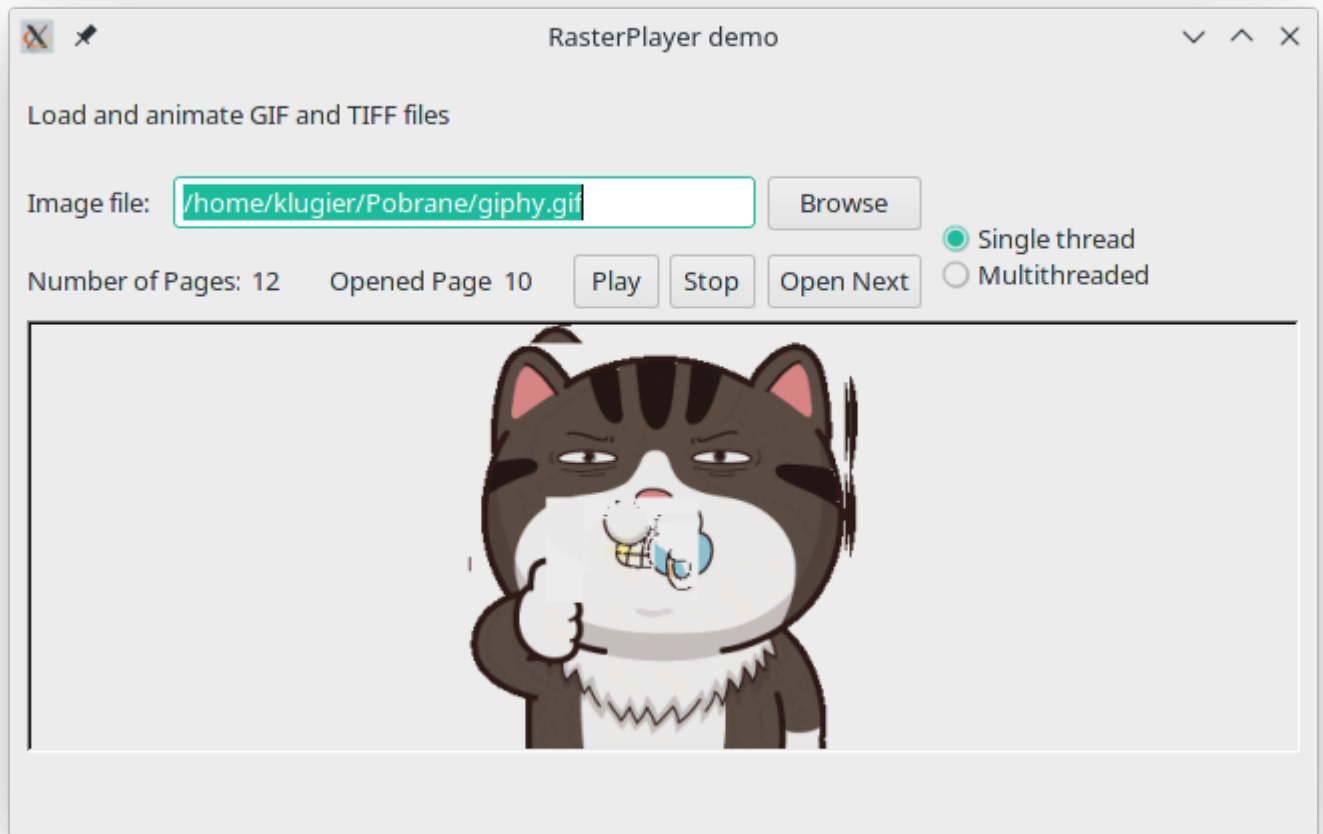

Here is the link to the giphy - just download the image and load it. I think the problems might be caused by alpha used in .gif.

It might be also bug in plugin/gif...

Thank you Klugier

The problem was in GetPageDisposal() handling.
Hopefully is fixed.

Hello Koldo,

Thanks! Works like a charm.

Klugier
