Subject: Change proposal: line break in RichType / fieldparts

Hello,
I would like to enable a line break in the field parts. This would make the use of a Field / RichTypeField much greater. E.g. ready-made text passages (At least in our operational scenario).

For this purpose I have the function:
RichPara :: Lines RichPara :: FormatLines (int acx) const {...}
made the following change:
(from about line 83 in the function)

Orginal:

```
if(cx + *w > rcx && s > text ||
   *s == '\t' && (t.align == ALIGN_RIGHT ? t.pos - format.lm > rcx
                                         : t.pos - format.lm >= rcx)) {
```

New:

```
if(*s == '\n' ||          // add dagobert Dez 2016 -> fieldparts with newline
   cx + *w > rcx && s > text ||
   *s == '\t' && (t.align == ALIGN_RIGHT ? t.pos - format.lm > rcx
                                         : t.pos - format.lm >= rcx))
   {
      if (*s == '\n')     // add dagobert Dez 2016 -> fieldparts with newline
         space = NULL;    // add dagobert Dez 2016 -> fieldparts with newline
```

Does something speak against this proposed amendment?

That is nice,
thank you
