Hi,
I am converting an existing app to support autocomplete droplists. As advised by the forum I am trying to replace droplists for DropGrids.
But DropGrids have a strange behavior. Please see printscreen and sample app.

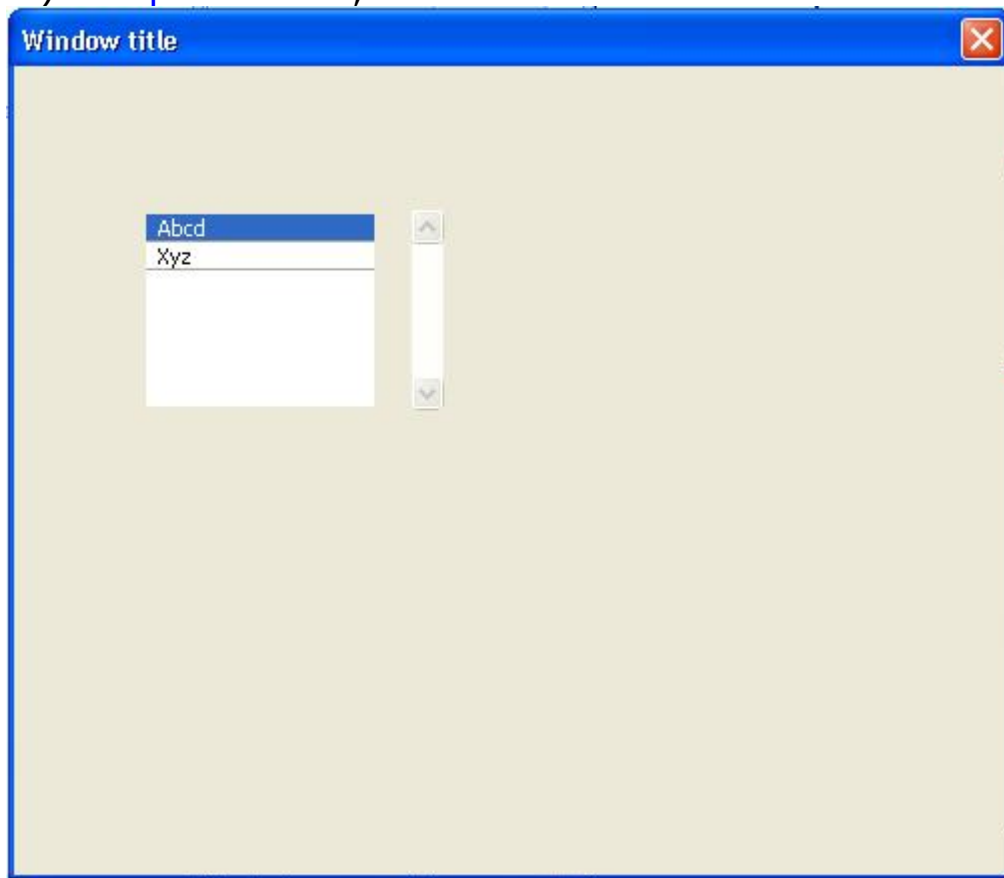

Env: WinXp and last version of Upp

Thanks

Kim

This is because you don't use DropGrid. See your layout file. You have widget called x which type is WithDropChoice<ArrayCtrl>!
There should be DropGrid x.
What you need to do is:
Add DropGrid package to your application.
Add #include <DropGrid/DropGrid.h> to your DropGrid.h file.
Then in layout editor you should see DropGrid on widgets list.
Just use it.

Ok... I didnt saw the DropGrid on the resource pallette, so I thought that DropGrid was a generic name for WithDropChoice<ArrayCtrl>.

Thank you

I will now try it

Kim
