What is new in version 2232:

theide:

- * Sorting of package has been improved, placing project packages first
- * Insert menu now has typedef ... CLASSNAME entry.
- * FileSel was improved by adding Places with common directories.

Core:

- * XmlRpc has improved error handling.
- * Xmlize now supports all Core Value types and has got support for Value serialization.
- * XmlParser has got new Peek methods. Socket has new GetPeerAddr method.
- * CParser now provides the information about current column.

CtrlLib:

- * TabCtrl has new Find/Set/Remove/Insert methods using reference to slave instead of index.

RichText:

- * RichTextView now have "ShrinkOversizedObjects" option.

Download it in <http://code.google.com/p/upp-mirror/downloads/list>

This release does not include .deb files. This will be fixed soon.

Debian packages will be available in Launchpad PPA as soon as google code mirror is recreated.

For now, you can grab nightly builds of version 2232 from nightly builds PPA (or from here if you prefer simpler interface), which are equivalent to release version. It will be available on these addresses few days only, but probably long enough to get the proper build in stable PPA.
