
Subject: --export-tr does not work

I all,

I am using "--export-tr" parameter in my application for internationalization, but in the exported .tr file are not present the empty lines for the missing translations. (It export only the translated phrases).

I am using U++ 2467.

Now I can use the translation ".t" file in the source code, but I never like the fat executables.

How can I fix this problem?

thanks.
Mubeta.
