Hi Friends,

I have created a schema file containing few tables..

For integers the Datatype in schema file is INT\_ and for String it is STRING\_.

My question is what is the datatype for alphanumeric variables.

Example :the variable may be:- abc123 etc

Does STRING\_ holds good or something else ...

With regards

Monty

Hi Monty,

You can use STRING\_ in your schema file for alphanumeric format.

Kind regards

Biobytes
