Subject: printing MinGW return

Hello folks

I am compiling with MinGW 32 bit at Win 7 using the command-line. It is working fine in general, just the compiler-return is being printed at screen only.

I would like to get it printed into a file, but the usual approaches do not work:

type mingw ARGS > return.txt
echo mingw ARGS > return.txt
copy mingw ARGS > return.txt
ctty PRN

The DOS-ref says that "stderr" cannot be redirected, as anyone had the religion "they should see the errors on screen always".
Can anyone give me a hint, how to get the errors into "return.txt"?

kind greets
Martin

According to "Using command redirection operators" article, you could use following command (note about 2> instead of >):
mingw ARGS 2> return.txt
But if
mingw ARGS
didn't return anything to the command prompt, then this might be doesn't help.

Hello

Full-top, this is working!
As you wrote: in some cases there are no errors, and I am using the -w. It creates an empty file in this case.

Thanks a lot...

have a nice day
Martin
