Hi,

It looks like the dial on the SliderCtrl does not scale properly on UHD environment.

Best regards,

Tom

Well, I have decided that it is not worth to read host platform appearance for slider dial (that is what was causing problems). Please check...

Hi Mirek,

Now the dial is even smaller and more difficult to hit on UHD. However, when I 'catch' the dial to drag, it grows a lot and is of somewhat suitable size until I release the drag again. (The shape has also changed to something like two ended wedge and changes to a single ended wedge when dragged. I think the default old fashioned rectangular dial would be sufficient, unless too much trouble. That one also makes better use of the vertical space of a horizontal slider.)

Best regards,

Tom

Hi

Thanks Mirek. I'm visiting the home country of U++ and will be back at the office next week. I will test it then.

Best regards,

Tom

Hi,

Just tried the Slider at UHD and now the dial looks just right size and shape until I drag it. When pressed, it shrinks to half in width and height, and covers just the top left quarter of the area it should.

Best regards,

Tom

Ops, sorry, small glitch, hopefully fixed.

In related news, UHD mode is now enabled by default (no need to call Ctrl::SetUHDEnabled() anymore).

Hi,

Now the SliderCtrl looks and works on UHD just as expected. Thanks!

Also, it was a good decision (at least from my point of view) to enable UHD support by default.
Thanks for that too.

Best regards,

Tom
