Hello,

If I create a DropList with different identifiers but the same text and different colors, the DropList doesn't show the new color if a different selection has already been made.

I made an example. (see attachment)

Instruction for use:
run the program and select a color combination from the DropList. This works ok.
then pick a different color combination. The color doesn't change, but GetData() does return the right number.

This stopped working when I updated UPP from 7746 to 8227 (Windows)
Also doesn't work with 9235 (Linux)

Thanks for reporting, should be fixed.

It was actually AttrText problem - so far, two AttrText were considered equal if text was equal. Means value displayed in DropList was same and no refresh was performed.

Added checking other attributes, hopefully it will not cause trouble elsewhere (should not).
