Hi everyone:

I got the following code:

```
class Caps : Moveable<Caps>
{
public :
    Caps() = default;
    rval_default(Caps);
};
```

```
Caps item1;
Caps item2;
```

```
Vector<Caps> list;
list.AddPick(pick(item1)); // works fine
list | pick(item2); // Throws error.
```

MSC says: Cannot convert argument 1 from 'Caps' to 'Caps &&'  
GCC says: Cannot bind 'Caps' lvalue to 'Caps&&'

The error is thrown when the following code is reached:

Vcont.h

```
...
95: Vector& operator|(T rval_ x) { AddPick(x); return *this; }
...
```

AddPick(x) is the offending sentence. Why?

Many thanks in advance.

change

```
95: Vector& operator|(T rval_ x) { AddPick(x); return *this; }
```

to

```
95: Vector& operator|(T rval_ x) { AddPick( pick(x) ); return *this; }
```

should fix the problem.

Yes, i suppose that, but i don't feel very confortable changing the core library. Well, for the sake of time, ill do that, but i hope that the developers of U++ fix this and improve even more U++.

Many thanks in advance.

Yeah, it's kind of a bug in the library. It seemed "Pick" thing will be removed in the new core. I guess that's why those little bugs remains.

You may want to post a bug report so that it gets attended..

C++11 grammar requires the relayed pick() be present (in more standard c++ usage, it translates to std::move() ). So you can be certain that this is a bug.
