cute little icons are hard to distinguish for new posts.

They all look like gray on small screens or any screen with some ambient lighting.

upload only one file per message, I don't recall when that went into effect.

In other portions of this forum the use of blue and red is much easier to distinguish.

Could there be a way to have the cute icons red and or blue ??

They would be much easier (more better) to distinguish.

Maybe a preference that can be selected by a upp forum member or user.

It is good to see the use of the red and blue markers to distinguish new posts to a thread.

I just got an Acer with a 10.1 inch screen.

Even with much larger screens or monitors it was a pain in some lighting conditions.

Thanks to whoever made the changes.
