hi, the AsJSON cannot deal with int64 value,

the code

```
Value item_id = 6364210481850221057;  
DUMP(AsJSON(item_id));
```

will log a double value,
how to fix it? :p

i didn't see th stickey! sorry to post here , help me to move to appropriate form 8)

DUMP(AsJSON(item_id));
```

will log a double value,
how to fix it? :p

That is not a bug, that is a feature :) This is because javascript doesn't have int64. Only values less than 2^{52} are supported for integers, higher numbers are converted to double (an loose precision!).

Best regards,
Honza

its sad :(

now i have to write a json like blow:

```
{  
  "item_id": 6364210481850220544,  
  "value": 6284399068525478145,  
}
```

how to do it in U++ :cry:

Export it as string.

```
{  
  "item_id": "6364210481850220544",  
  "value": "6284399068525478145",  
}
```

Then also import as string. Then convert back to int64 (I would expect "id" to be rather uint64).
