Subject: Some troubles with ToolBar & QTF

I have a toolbar and use Add to add flat button to it, like:

bar.Add("\1Select entry point. Current configuration:&[* Active file in editor]", CtrlImg::Home(), Callback());

I have 3 problems with this:
1. The tool tip, once it is QTF enabled, gets a bigger font than non QTF tooltips. How to guarantee the exact same size.
2. If I use [Select entry point. Current configuration:]&[* Active file in editor], with an extra set of [], the characters get switched over to Cyrillic. I tried escaping : but doesn't work.
3. How to add a button with text on it. Preferably with left or right aligned text relative to the image. Text just changes the tooltip. Label ruins the entire layout. Do I need to add an external ToolButton?

I have 3 problems with this:
1. The tool tip, once it is QTF enabled, gets a bigger font than non QTF tooltips. How to guarantee the exact same size.

bar.Add("\1[g Select entry point. Current configuration:&[* Active file in editor]", CtrlImg::Home(), Callback());

2. If I use [Select entry point. Current configuration:]&[* Active file in editor], with an extra set of [], the characters get switched over to Cyrillic. I tried escaping : but doesn't work.

Escaping should work. Can you post what have you tried?

[code]
3. How to add a button with text on it. Preferably with left or right aligned text relative to the image. Text just changes the tooltip. Label ruins the entire layout. Do I need to add an external ToolButton? [/quote]

What about using Button?

Mirek
