Subject: Problem assigning a date to CalendarCtrl

I am working on an app that uses a form with a CalendarCtrl on it. I want to be able to assign a date to the ctrl and have it displayed when the form is displayed. I tried using the SetDate(Date) function without success. I was able to use the SetDate(y,m,d) function to display the desired year and month. Getting the day to be highlighted does not seem to work. In addition, if I get the date from the ctrl I get the assigned year and month, but the current day. If anyone has any ideas, please let me know.

Thanks,
Dave
