Quote:1. Remove / Resolve dependencies between "theIDE" and the U++ lib build. We need to be able to build the lib for both M\$ and Linux within a fully encapsulated cmake build.

Funny, this was my first impression as well, but after a one week trial (I ported a simple app from wxwidgets, just for fun), I did not want to use uncomfortable makefiles and wait for long rebuilds anymore.

TheIde and it's built in very fast BLITZ builder technology is really addictive You can be really efficient with TheIde and U++, and this is is true, not marketing only.
