
Subject: release mode with mingw and msc8

Hello,

my hard disk crushed and I need to reinstall many programs (several giga).
Now I have not the right mood to download MSC8 and I need to prepare quickly an executable with mingw and distribute it.
I know that mingw is slower than msc8 and produces bigger files but are there other aspects that should prevent me to use it when I need to prepare a release version?

Thanks,
Luigi
