It would be very nice to have in editor key combinations as "twice Caps Lock in short period", dtto for left/right Shift, Alt, Ctrl.

These operations are basically no-ops without effect but they are very intuitive and do not require wasting time.

E.g. by default switch between *.cpp file and header is via Alt-O which is clumsy - both hands are needed and this takes away some space in human short term memory. Using Caps Lock twice would be ideal for this operation.

My ideal would be something as Java editor IntelliJ (or some Unix editors) which allow to edit practically without mouse.

Possibly function keys could have features attached to two (three) clicks - the delay between one such click is ~0.1 second and this is not yet perceived by humans as a delay (up to ~0.3 second everything feels immediate).

Playing with the keys I notices I can assign the same key shortcut to several actions and get no warning or indication of problem.
