IC. i created the package as without a main window. now i created a new package and it defaults to use `CtrlLayout("this", "title");`

`Title()` can set its title, but without `CtrlLayout`, it disables all .lay controls.

glad i've put a window with controls.

now the problems are library (dll) usage, which i've replied a post in `ide::package` subforum and control usages, which i'm learning.

trouble you guys later.
