
Subject: Make TimeStop "Moveable"?

Hello,

I need to store "TimeStops" in a Vector.

I changed the u++ source in Util.h from:

```
class TimeStop {  
    dword starttime;  
  
public:  
    int  Elapsed() const      { return GetTickCount() - starttime; }  
    String ToString() const;  
  
    TimeStop();  
};
```

to:

```
class TimeStop : public Moveable<TimeStop> {  
    dword starttime;  
  
public:  
    int  Elapsed() const      { return GetTickCount() - starttime; }  
    String ToString() const;  
  
    TimeStop();  
};
```

Could you introduce this change in the repository?
