Subject: Can't stop at breakpoints in debugger

Hi,

I wonder what I'm missing. I set breakpoints, I recompiled everything with MINGWDebug (in Ultimate++ 2007.1). I turned Full debug mode on

F5 or CTRL+F10 run over those breakpoints. The program eventually stops when there is a panic failure. Then I can see assembly code, registers and so on. But I can't examine code at the breakpoints.

I could run gdb in a DOS window (Debug externally), but that doesn't help me much.

Thank you in advance.

Micha
