okigan wrote on Tue, 03 July 2007 21:13 Why not associate the IDE with .lay and other files so double click in VS would start up as the editor?

Well, this is what I was suggesting, was not I

Quote:  
linking against .obj file corresponding to \*.iccp would be acceptable solution since it does not rely on specific VC++ extensions.

I do not get this. What extensions?

Mirek
