Subject: Multiselect and contiguous cells in ArrayCtrl
Posted by forlano on Sat, 07 Jul 2007 12:28:03 GMT

Hello,

in an arrayctrl I've enabled multiselect rows. Selecting one row and then with SHIFT+arrow_UP or arow_DOWN I can select contiguous cells. I wonder if it is possible to select non contiguous cells. I was not able to do it.

I was not able to found a method that returns the indexes of the selected rows. I tried to scan the whole array and test with IsSelected(i) each row but without success.

Moreover it seems that the selection is lost when I open another windows. Is it normal.

Luigi
