Hi,

This code is extremely useful.

May I ask how or where GuiFont() and FormatMoney() are defined?

It seems that the code base may have changed somewhat since the original posting:

f:\myapps\testapp\TestApp.h(38) : error C2660: 'Upp::GetSmartTextSize' : function does not take 3 arguments

f:\myapps\testapp\TestApp.h(38) : error C2228: left of '.cx' must have class/struct/union

Thx.
