Hi Mirek,

Thanks for the quick reply. BTW, I scoured the code base and found another thread which talked about changes to the code. For others, this apparently works now:

```
myArrayCtrl.AddColumn( "colName" ).SetDisplay( StdRightDisplay() );
```

Other possibilities are StdDisplay() and StdCenterDisplay().

I will look at your Money code closely this weekend and see if I can get it to compile/run on my machine.

Another question: is there a standard format for displaying %d or %f like this:

\$58,782,398.23

with commas? If not, maybe you can guide me to where I can add code for this feature with any suggestions on the protocol. If you do, I can code it up and submit it for addition to the code base.

Thank you.

Regards,
Ken
