Quote:I've been having problems getting a Unit Test to work with U++ - tried CPPUNIT and UnitTest++, which were both giving me link headaches and strange Microsoft C++ exceptions at strange memory locations.

Thats strange. I have had no serious problems with UnitTest++ and using it a lot.
No compile problems. No link problems with MSVC.

I have uploaded my Upp UnitTest++ package. Just add it to the package dependencies and include UnitTest.h:

```
#include <UnitTest/UnitTest.h>
```

After this somthing like:

```
TEST (MyFirstTest) {  
    CHECK(true);  
}
```

should work without problems.

- Ralf

Updated: Small mistake in the code example.
