johnevans77 wrote on Sat, 21 July 2007 01:48 Thank you

I will follow you advise.

Regarding to your code above.

It works. But i usually using cout to output something to console. When i try to use std::cout, the compilation produced many errors.

I can forget std namespace if there is alternative. In this case, how to output the 'out' variable to console?

Thank you,  
JE

Well, I think the reason is that there is no

`operator<<(ostream&, String)`

Before going into the details, you can easily fix that by using Cout() (U++ thing) instead of std::cout.

`Cout() << " member is " << *b;`
