
Subject: Can I extend the Serialization to other types?

How can I serialize the following:

```
typedef enum {  
    FOO_A = 0,  
    FOO_B = 2,  
    FOO_C = 42  
} FooType;
```

The serialization does not know what a FooType is.

How can I extend serialization to know about this new type?
