Subject: Extra callback needed in SliderCtrl

The SliderCtrl currently only has the default WhenAction callback. This gets called repeatedly when the user drags the thumb, but I want to be able to differentiate between a complete thumb move and a drag-in-progress action.

I have added a second callback that gets executes everywhere that WhenAction does except for during thumb drags. Small changes in LeftDown, LeftUp, Inc and Dec.

Is it possible to have this added to uppsrc? Feel free to change the name of the callback.

James
