... and another problem.

I have MySql-Server installed on my system and added this path into the Build-Method:

```
INCLUDE : /usr/include/mysql  
LIB: /usr/lib/mysql
```

I get these errors when compiling my project.

```
mainmenu.cpp  
In file included from  
/home/michael/Backup/USB-STICK/Entwicklung/UPP/prohibisZA/mainmenu.cpp:7:  
/home/michael/Backup/USB-STICK/Entwicklung/UPP/prohibisZA/mainwindow.h:12:25: error:  
MySQL/MySQL.h: No such file or directory  
/home/michael/Backup/USB-STICK/Entwicklung/UPP/prohibisZA/mainwindow.h:47: Fehler:
```

On my Windows-System i installed MySql-Server with Developer-Addons. What do i have to install on Linux to get this running?
