On Net-, Open-, DragonflyBSD one must use sysctl system call like that:

```
int mib[2], maxproc;  
size_t len;  
  
mib[0] = CTL_HW;  
mib[1] = HW_NCPU;  
len = sizeof(maxproc);  
sysctl(mib, 2, &maxproc, &len, NULL, 0);
```

But then the kernel sources have to be installed and the following files have to be included:
<sys/systctl.h> and <sys/param.h> on Net-, OpenBSD and <sys/types.h> on DragonflyBSD.
