Quote:and to start collecting code that it does not parse properly....

I think I will provide plenty of those over time..

But it's not only about preprocessing, I have some more basic problems, like I don't have local variables parsed.

void TestLocalVariablesParsing(int variableone, int anothervariable, int thirdvariable)
{
//here write "vari" and hit Ctrl+Space .. nothing is suggested.
//here write "ano" and hit Ctrl+Space .. nothing is suggested.
String tempstring;
//here write "temps" and hit Ctrl+Space .. nothing is suggested.
}

It annoys me a lot personally, I'm used to IDEs which do parse local variables. (MSVS, VSlick).
