Hi John, please check this up:

1. New package
2. Choose "Console application (no U++)"
3. Take your first code posted in this topic
4. Add: `#include <Core/Core.h>`
5. MENU->Project->Add package to...->(Choose "Core")
6. Add operator ~ to "a" variable to get const char in line:
`std::cerr << ~a << std::endl;`
7. It compiles OK.

Michal
