I still don't understand how to use the socket classes.

(Sorry, I'm newbie at C++. Used C before. Now moving to C++ and Ultimate++ framework).

Could you give me an example of ServerSocket and ClientSocket?

Thanks

I'm building a client/server application. U++ is perfect for the GUI, but I'd like to use the Sockets classes, so I don't need to use the lower level Winsock directly.

U++ GUI + Sockets classes + the simple compression library zlib, all these already in U++, will be enough for my application.

Thank you again.
