Found them KDE doesn't actually follow Tango, though it is close.

Running
kde-config --path icon
gives:
/home/James/.kde/share/icons/
/usr/share/icons/
/opt/kde/share/icons/

So presumably the sequence should be:
1) Try and find the KDE icons (is it possible to determine whether GNOME or KDE is running?).
This is further complicated by needing to determine which theme is running.
2) Optional: Try and find Tango icons
3) Use GetGtkImage.

It may be more trouble than it's worth to match icons on KDE. Anyone who really cares can set
the GTK theme to match KDE, so perhaps you could just use the Gtk icons?
